IVAS company

- Developed front-end and back-end applications using HTML, JavaScript, and Laravel framework.
- Built SQL databases.
- Developed web applications that use MVC and HMVC design patterns.
- Participated in code reviews.

PROJECTS

PALEX

Seminar Project

PALEX is a mobile application developed in Flutter. PALEX allows people to lend items as well as exchange products and services. The application includes many features, such as adding and searching for products, chat, notifications, and a map that displays nearby offers. Firebase was used for data storage and authentication. OneSignal is used for push notifications and Google Maps APIs for maps.
