## Skills

- Appian
- Java
- MySQL
- REST API
- Node js
- React Native
- JavaScript
- Express

## Personal Projects

**Car Rental project:**

This project makes it easier for car rental companies to store information related to the cars to be rented.

**Miss Chic:**

A website that presents a simple, elegant, easy to use environment for women, and a place where she can find whatever she wants from health to style up to her family needs. The users will benefit from all available services like reading several articles and make recommendations for nearby shops, salons, etc.

**Sana:**

IOS application that facilitates the search for the customer, makes it faster and simpler through several features. On one hand, this application allows the customer to search for a certain product through visual search and shows all the reviews on this product from the application itself or Twitter. In addition to that, there will be a list of similar products and the customer can post reviews on products to share his experience with the followers who can interact with them. On the other hand, a business owner can create an account, link it with his business social media accounts (Facebook, Instagram).

**Amaan:**

A smart home system based on gathering the necessary information by reading the results of different types of sensors . The response of the system depends on the level of risk. In the case of simple danger ,the owner is alerted through a related phone application that was built using React Native or even self-control.
